

The **Retail Point of Sale** Module for Microsoft Dynamics™ GP®

Compass Technologies' Retail Point of Sale (POS) was designed to provide customers with fast, outstanding service at the point of sale in a retail environment. POS incorporates the features and benefits required in offering the best possible customer service.

Exceedingly Simple User Interface

In several usability studies, test subjects were typically able to complete an entire sales life-cycle—from ringing up merchandise to entering payments and returning change without any prior training or retail experience! The intuitive interface supports touch screen and keyboard and mouse interaction while providing a comfortable environment for all operators.

Powerful Functionality to Meet Global Demand

Compass Retail Point of Sale is utilized in dozens of countries around the world. POS features were researched and developed over the years based on customer feedback, industry trends and advancements in technology. The Compass commitment is simple: deliver a world-class, best-of-breed retail solution. Compass POS provides the cornerstone of global solutions for retailers.

Truly Seamless Enterprise Integration

Integration is a hot topic, but why? Integration between all business applications within an enterprise offers extraordinary value, but buyers beware. *Integration* can mean many different things. The retail solution from Compass Technologies is truly a ***built in*** system.

Extensive Setup Options and Business Rules

A system should *support* business operations, not *dictate* them. Compass Technologies has years of experience working with retail businesses. The one common characteristic observed is that all retailers are unique. Compass POS incorporates a wide range of user-definable business rules to ensure the

system will accommodate the most demanding requirements.

Designed for Scalability and Customization

To better suit POS needs, Compass designed the system to support a highly extensible architecture. A variety of tools are available to empower customers and developers alike.
